

Not digital disruption
Rather digital solutions

Re-Cycled & Distressed Timber Panels (without the hassles)

Gen-Eco and Rawinkk have taken all the hard work out of creating distressed timber wall panels.

By scanning real timber, we have created a range of options such as Chevron and Herringbone patterns.

We can then direct print onto materials such as plywood or MDF to create panels that can be installed in minutes as opposed to the time consuming process of building a wall of individual planks.

Distressed panels printed onto CD plywood.
